

# GREENLAND GLACIER NAMED IN MEMORY OF KONRAD “KONI” STEFFEN

Thanks to a recent decision by the [Greenland Place Names Committee](#), a previously unnamed glacier in Greenland now bears the name of world-renowned Swiss glaciologist Professor Konrad “Koni” Steffen. Koni was also an Honorary Member of IPF, and served on the Baillet Latour Antarctica Fellowship Committee. Professor Steffen passed away in August 2020 while on a research mission to Swiss Camp, which is situated upstream from the Jakobshaven Glacier in Greenland.

Now known officially as Sermeq Konrad Steffen, the ocean-terminating glacier flows into the Arctic Ocean in the far northwest corner of Greenland.

## Honouring a legend

William Colgan from the [Geological Survey of Denmark and Greenland](#) (GEUS), proposed naming glaciers after two of his former colleagues at GEUS Niels Reeh and Anker Weidick, along with Professor Steffen, who as one of the world’s top experts on the Greenland Ice Sheet, spent decades studying the ice sheet’s dynamics and the dramatic changes it has been undergoing as a result of climate change.

Before his passing, Professor Steffen was the Director of the [Swiss Federal Institute for Forest, Snow and Landscape Research](#) (WSL) and the Scientific Director of the [Swiss Polar Institute](#) (SPI). Prior to that, he

was the Director of the [Cooperative Institute for Research in Environmental Sciences](#) (CIRES) in Boulder, Colorado, USA.

During his career, Professor Steffen also found the time to teach and mentor some of the world's top glaciologists. He loved taking them on memorable research expeditions to the Greenland Ice Sheet.

He was a close friend of IPF Chair and Founder Alain Hubert and Nighat Amin, both of who helped reconstruct Swiss Camp research station in 2012. Professor Steffen used Swiss Camp as a base to conduct the bulk of his research on the Greenland Ice Sheet over the last 30 years.

He also visited the [Princess Elisabeth Antarctica research station](#) in 2012, when he installed two automatic weather stations, at PEA and on the Antarctic Plateau, off the Gunnestadtbreen. His legacy is the establishment of five automatic weather stations across a 220km transect to collect high resolution data that will contribute to improving climate models in East Antarctica in what is called the [Princess Elisabeth Antarctica Climate Experiment](#) (PEACE) project.

His extensive contributions to our knowledge about the Greenland Ice Sheet, climate change, and the cryosphere makes it fitting that Greenland has decided to name a glacier in his honour.

The naming of the glacier after Professor Steffen was publicly announced at *The Cryosphere in a changing climate - A scientific symposium in memory of Koni Steffen* in Davos, Switzerland June 23-24.

At the same event, Dr. Derek Houtz from the WSL spoke extensively about the legacy of his former mentor.

## **A friend to Greenland**

This is the first time in many years that a geographical feature in Greenland has received a name not of Greenlandic origin. However the extensive contributions Professor Steffen and his colleagues made to knowledge about Greenland also helped to elevate Greenlandic society.

Before naming the new glaciers, the Greenland Place Name Committee carried out extensive research to see if the newly named glaciers had any previous unregistered names that the Greenlandic population had used for these particular glaciers. They found no record of these glaciers bearing a name given by the local population. The families of the deceased researchers were also consulted prior to the naming of the glaciers.

In recent, times it is unusual for a geographical feature in Greenland to receive a name not of Greenlandic origin. However, the extensive contributions Professor Steffen and his colleagues made to knowledge about Greenland also helped to bring Greenland to wider attention internationally. Many politicians and journalists were invited to Swiss Camp, including former US Vice-President Al Gore and the Speaker of the US House of Representatives Nancy Pelosi.
